Automated personnel and further training management

„The colleagues from infoteam have developed a customized and very performant solution in close cooperation with us.**"**

Karl-Heinz Maier, *Head of Test Laboratory Siemens Healthineers*

For our client:

SIEMENS
Healthineers

Initial situation

- Siemens Healthineers' technical-physical testing laboratory drives digitization of its own processes

- Personnel management and further training previously listed in Excel lists

- Siemens-wide software solution provides different focus than the specialized testing lab needs

- **Goal:** Conceptual design and development of a semi-automated software solution for efficient and flexible personnel and further training management

- **Goal:** Clear monitoring of employee qualifications for proof within the scope of audits and to quickly identify future needs

Solution

- Collaborative concept development and feedback loops with Siemens Healthineers for parallel software development

- New development of a modern web application including database and business logic

- Quick overview of open trainings, training status of employees, etc.

- Automated training assignment for specific roles (e.g. auditor) or when new versions of training are released (incl. automatic reminder emails)

- Consideration of necessary prior qualifications (e.g., reviewers must be auditors)

- Project documentation: solution, code, functionality
